

ABSTRACT

The present invention relates to a system and method for providing a web-based graphical user interface to a legacy insurance data process system to increase the functionality and ease of use in quoting and issuing insurance quotes and policies, providing insurance information and other insurance related services. The system and method integrate use of Internet technology in business work flows, provide dynamic data entry for insurance coverage packages and pricing programs, offer easy access to value-added products and services, and enable local printing of professional insurance applications, proposals and forms to facilitate immediate delivery of professional-quality proposals to customers.
